

Prayer Requests

- Dorothy Sawyer - We have good news that doctors ruled out any blood clots after Dorothy was admitted to the hospital earlier this week! She was diagnosed with pulmonary hypertension and is receiving IV antibiotics for a minor leg infection. Please pray for her infection to clear completely, for her strength to return, and for a smooth discharge home that is planned for today!
- Dawn Katzer - Dawn's procedure went well and they were able to get the stone removed. She is now at home recovering. Thank you for your prayers!
- Josiah Stanley - as of Sept. 5th - Please continue to keep Josiah in your prayers. He was taken to the emergency room last night for ongoing dehydration and was given a bag of IV fluids. Doctors are continuing to closely monitor his heart rate and rhythms using his heart monitor. Please pray for sustained hydration, steady and safe heart rhythms, and wisdom for his medical team as they monitor his progress.
 - He is currently dealing with dehydration, and his heart rate has been dropping into the 40s when he lies down. Pray that his hydration levels normalize quickly, that the upcoming heart monitor provides clear and accurate answers for his doctor.
