## GOD'S GRACE PRESERVES—GENESIS 8:1-22

### *Grace on display as the waters recede*

1. Scientific analysis would state that there is not enough water on the earth to flood everything and the amount of weight the water would produce could not be sustained. Why are arguments like these so compelling to believe?
2. Why is it so important that we know the truth and are not vulnerable to myths and revelations? How massive is the problem of our vulnerability?

4. We do not sacrifice as Noah did so there is not a direct correlation to building an altar to God. However, what does it look like for you to give your best? What does it look like to give of your “first fruits” in our day and age?
