“ The End of the Age?”  
&  
The Mark of The Beast

## Revelation 2:7 New King James Version

7 “He who has an ear, let him hear what the Spirit says to the churches. To him who overcomes I will give to eat from the tree of life, which is in the midst of the Paradise of God.” ’

## Daniel 12:9-10 New King James Version

9 And he said, "Go your way, Daniel, for the words are closed up and sealed till the time of the end. 10 Many shall be purified, made white, and refined, but the wicked shall do wickedly; and none of the wicked shall understand, but the wise shall understand.

# The Mark of the Beast

## Revelation 13:5-18 New King James Version

5 And he was given a mouth speaking great things and blasphemies, and he was given authority to [a]continue for forty-two months. 6 Then he opened his mouth in blasphemy against God, to blaspheme His name, His tabernacle, and those who dwell in heaven. 7 It was granted to him to make war with the saints and to overcome them. And authority was given him over every [b]tribe, tongue, and nation. 8 All who dwell on the earth will worship him, whose names have not been written in the Book of Life of the Lamb slain from the foundation of the world.

## Revelation 13:5-18 New King James Version

9 If anyone has an ear, let him hear. 10 He who leads into captivity shall go into captivity; he who kills with the sword must be killed with the sword. Here is the [c]patience and the faith of the saints.

### **The Beast from the Earth**

11 Then I saw another beast coming up out of the earth, and he had two horns like a lamb and spoke like a dragon.

## Revelation 13:5-18 New King James Version

12 And he exercises all the authority of the first beast in his presence, and causes the earth and those who dwell in it to worship the first beast, whose deadly wound was healed. 13 He performs great signs, so that he even makes fire come down from heaven on the earth in the sight of men. 14 And he deceives [d]those who dwell on the earth by those signs which he was granted to do in the sight of the beast, telling those who dwell on the earth to make an image to the beast who was wounded by the sword and lived.

## Revelation 13:5-18 New King James Version

15 He was granted power to give breath to the image of the beast, that the image of the beast should both speak and cause as many as would not worship the image of the beast to be killed. 16 He causes all, both small and great, rich and poor, free and slave, to receive a mark on their right hand or on their foreheads, 17 and that no one may buy or sell except one who has the mark or the name of the beast, or the number of his name. 18 Here is wisdom. Let him who has understanding calculate the number of the beast, for it is the number of a man: His number is 666.

# DLT

## Distributed Ledger Technology

## **What Is Distributed Ledger Technology (DLT)?**

Distributed ledger technology (DLT)— is the technology blockchains are created from, and the infrastructure allows users to view any changes and who made them, reduces the need to audit data, and ensures data is reliable.

## **How Distributed Ledger Technology Works**

DLTs allow information to be stored securely and accurately using cryptography.

Once the information is stored, it can become an immutable database; the rules of the network govern the ledger.

## **Fast facts**

If something is immutable, it is unable to be changed.

Blockchains are always immutable because they are decentralized public ledgers

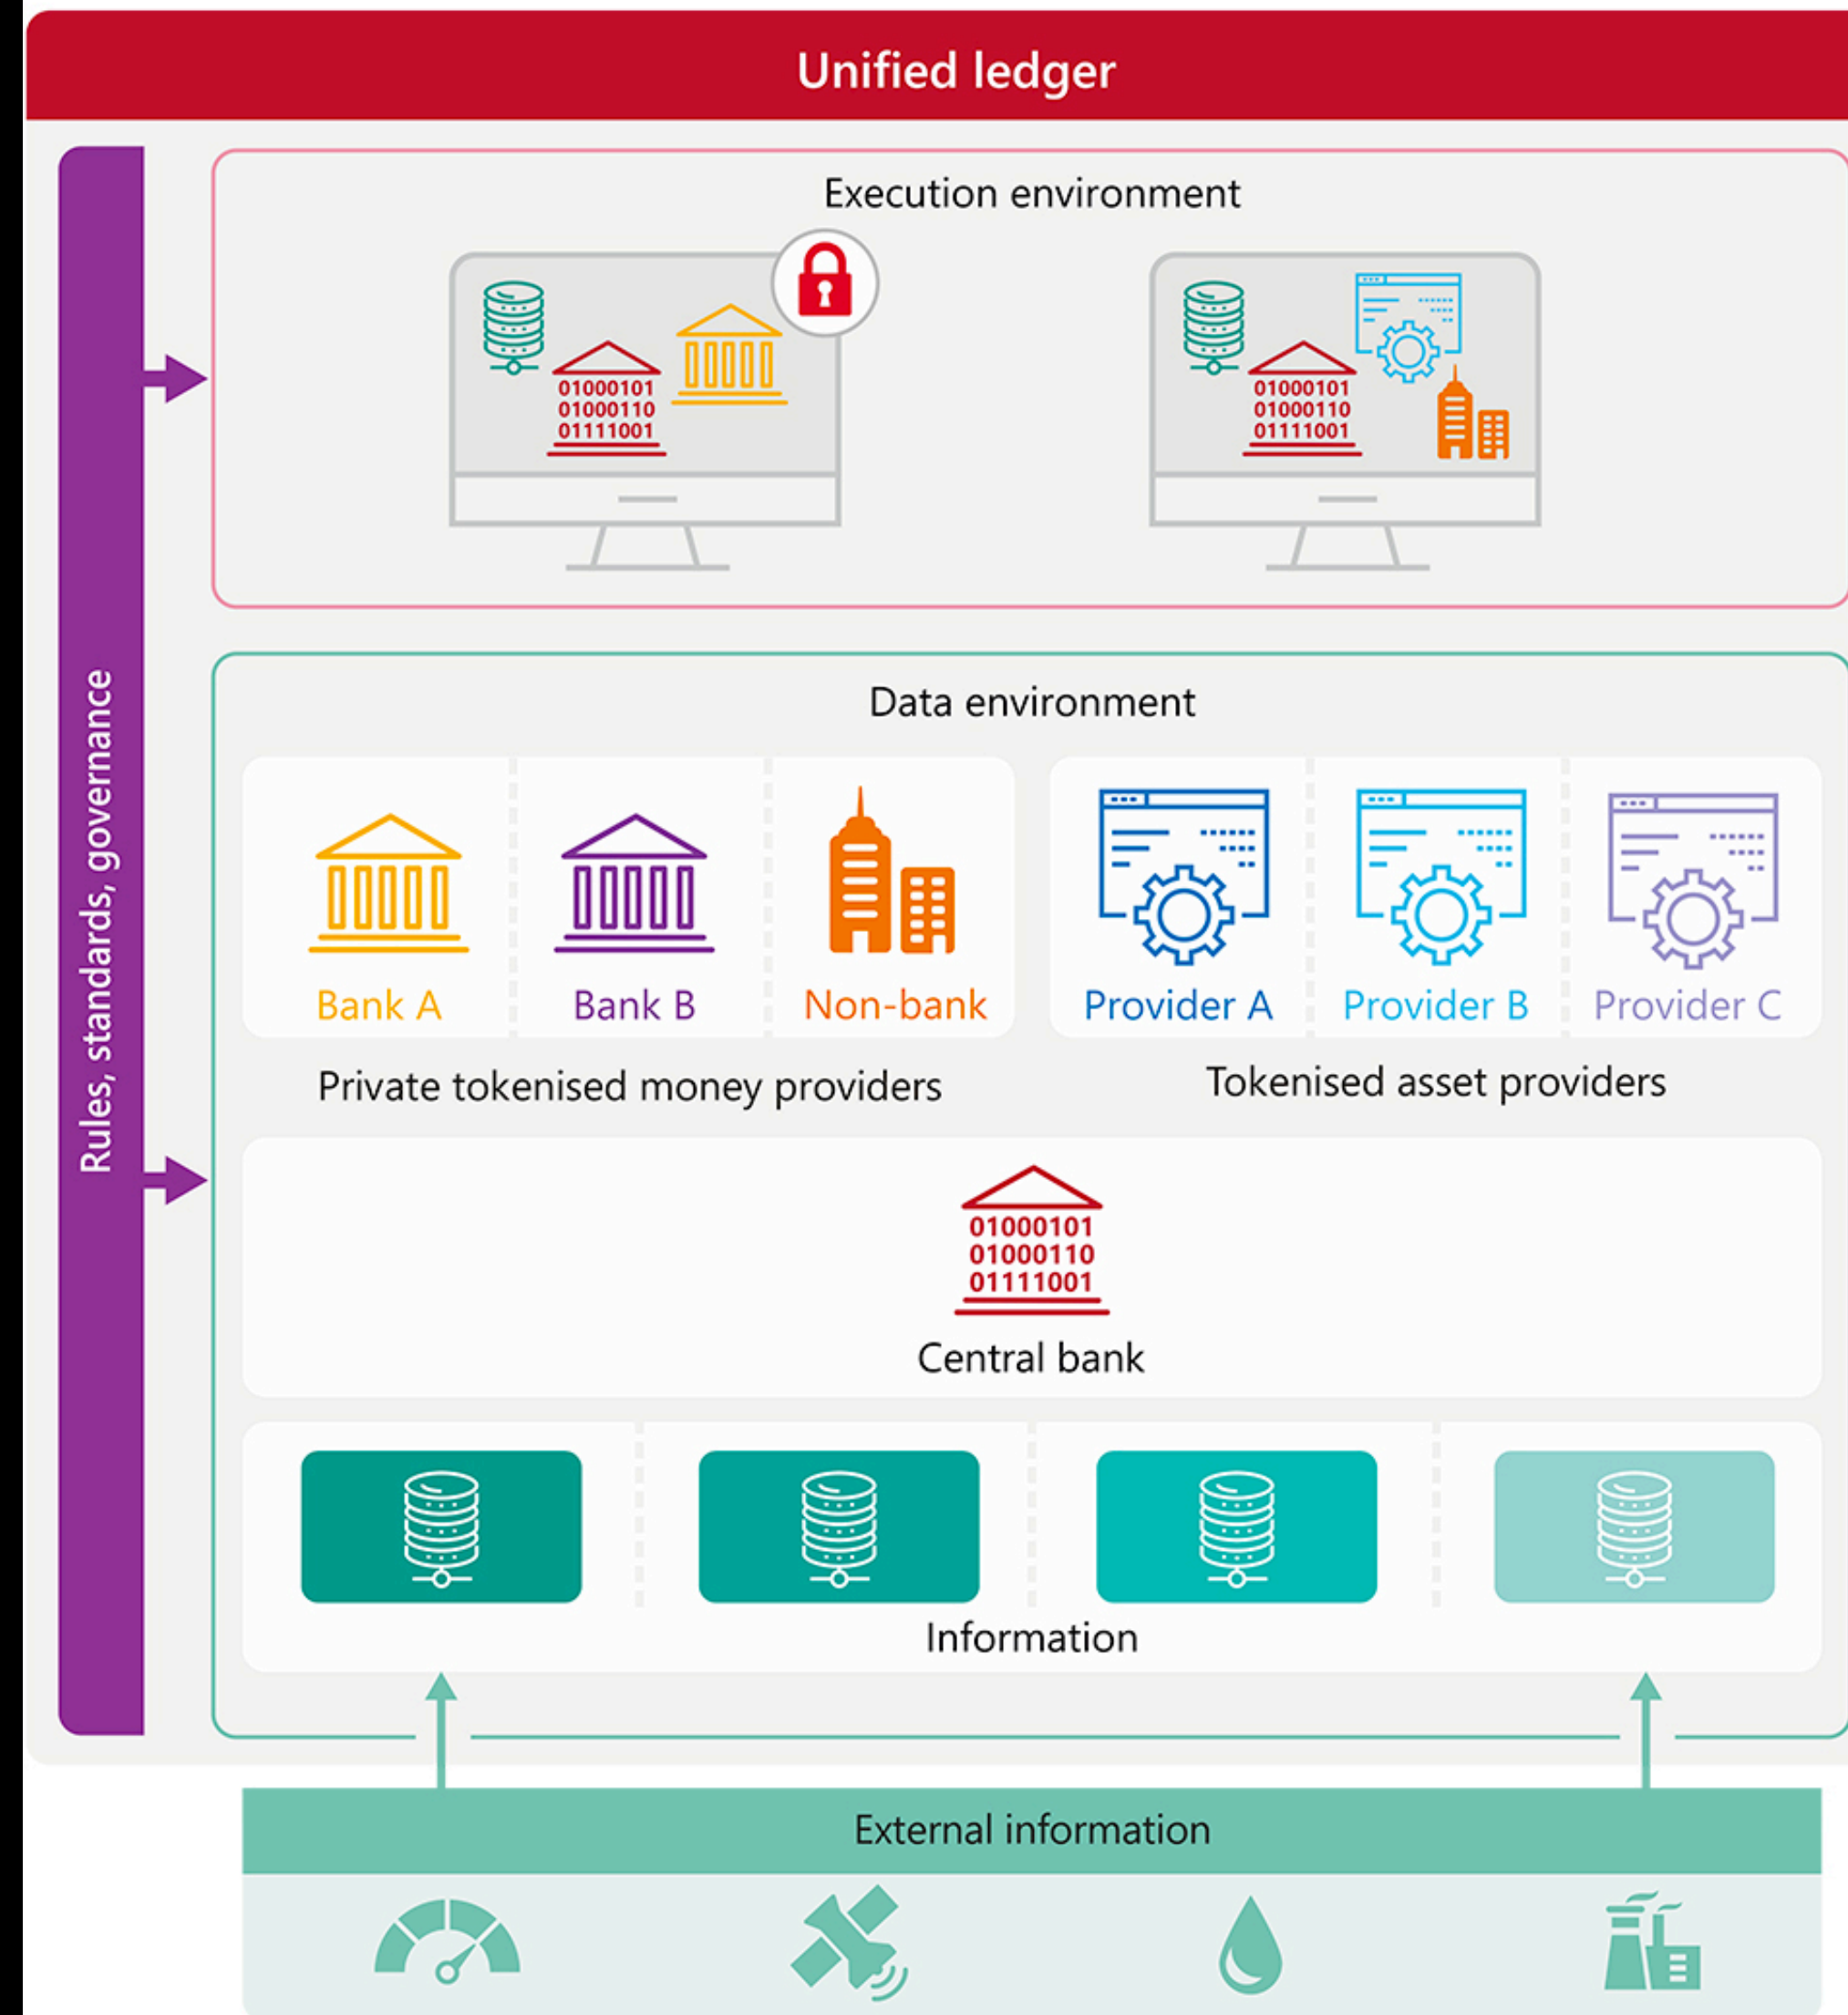

If the network reaches a consensus about the validity of the latest ledger, the transactions are finalized, encrypted, and used as a basis for the following transactions. This is how blockchains develop—each block contains encrypted information about the preceding block, which makes them impossible to change.

The unified ledger comprises its data and execution environments as well as the rules, standards and governance applying to those environments. The data environment contains money, assets and information (internal or external to the ledger). Each of these includes partitions (denoted by dashed lines) delineating ownership and/or access by the relevant entities. Operations involving one or more of these elements are carried out in the execution environment, either directly by users or through smart contracts. The lock indicates that some operations may be performed on confidential encrypted data.

Funders of a deep-pocketed new "rejuvenation" startup are said to include Jeff Bezos and Yuri Milner.

By Antonio Regalado

September 4, 2021

Our mission is to restore cell health and resilience through cellular rejuvenation programming to reverse disease, injury, and the disabilities that can occur throughout life.

- A community of leading scientists, clinicians, and leaders from both academia and industry will work together towards this common mission.
- Altos is based in the US in the San Francisco Bay Area and San Diego, and in the UK in Cambridge. The company also has significant collaborations in Japan.
- The Altos Board of Directors and advisors include Nobel Laureates and scientific leaders.

## We Are Building a Future Free of Age-Related Disease

SENS Research Foundation works to develop, promote, and ensure widespread access to therapies that cure and prevent the diseases and disabilities of aging by comprehensively repairing the damage that builds up in our bodies over time. We are redefining the way the world researches and treats age-related ill health, while inspiring the next generation of biomedical scientists.

## Bridge Two: The Biotechnology Revolution

While some people might be intimidated by the idea of massive nutritional supplementation, it is purely a short-term solution, says Kurzweil. He predicts that in the next decade or so, biotechnology will render many of our deadliest diseases and conditions powerless. This is the “second bridge.”

“Within 10 or 15 years, we’ll be able to reprogram a lot of biological processes away from disease and aging, to stop and reverse aging and maintain optimal health,” he says.

As an example of biotechnology at work, he cites obesity. According to the National Institutes of Health, about 60% of American adults are either obese or overweight. Obesity is closely linked to heart disease, various cancers, diabetes, joint injuries, inflammation, and a host of ill health effects. In a recent editorial in the *New England Journal of Medicine*, researchers estimated that the current generation of Americans may experience a shortened life expectancy of almost a year because of diseases associated with obesity.

Kurzweil, however, has little patience for this kind of prediction, arguing that it is dangerous when researchers make predictions based on one trend alone, as if life occurs in a vacuum. Instead, he predicts that before long, scientists will invent drugs that can turn off the body’s calorie-storage mechanisms. People will be able to eat as

spent much of his life studying the rate of technological innovation, he is convinced that nanotechnology is the future.

“It sounds very futuristic, but I’d point out there are already many experiments in animals that use blood cell-sized devices,” he explains. “One experiment we write about in the book involves a device the size of a blood cell that cured type I diabetes in rats. Pancreatic islet cells are actually inside the device. Glucose gets into the islet cells to be measured and insulin is released. It works perfectly normally. That’s occurring today.”

Kurzweil predicts a future in which these tiny robots are everywhere, attacking a host of conditions and enabling humans to “go substantially beyond the limitations of biology.” Robots the size of red blood cells could be injected by the billions to carry oxygen more efficiently than can actual red blood cells. Neurons could be enhanced by tiny microcomputers implanted in the capillaries of the brain, which would communicate with biological cells, each other, and a wireless Internet. Still other robots could monitor our blood glucose and maintain a safe level of insulin, rendering diabetes powerless. The opportunities are endless.

“We’ll be able to provide full-immersion virtual reality from within the central nervous system,” he says. “Nanobots’ could shut down the signals coming from your real nervous system and put in place signals you would be receiving if you were in the virtual environment. Designing new virtual environments will be a new art form.”

This concept strikes to the very heart of what it means to be human. To many, the idea of tiny robots working within our bodies is literally heresy, evoking images of horror movies and a world populated by cyborg beings that have lost their essential humanity.

Once again, however, Kurzweil has no patience for this critique. This fear will be swept away, he says, by the enormous benefits associated with this technology. He points out that the miniaturization of technology is already increasing exponentially. Computers that once required whole rooms to operate now fit within the palm of a hand. It is only a matter of time before they can fit within the walls of human arteries.

essential humanity.

Once again, however, Kurzweil has no patience for this critique. This fear will be swept away, he says, by the enormous benefits associated with this technology. He points out that the miniaturization of technology is already increasing exponentially. Computers that once required whole rooms to operate now fit within the palm of a hand. It is only a matter of time before they can fit within the walls of human arteries.

“We will become our technology,” he says. “We’re going to merge with it and will be indistinguishable from it. It’s not going to be a matter of how we compete with the machines. We will become the machines.”

To Kurzweil, this is only natural. Technology is the next step in human evolution. Our biology was originally designed to deal with scarcity. From birth until death, the human body is designed to hoard calories, to crave fat and sugar, and to react to danger with stress chemicals that raise blood pressure and constrict arteries. Until recently, this made sense. It was logical for the survival of the species that following our reproductive years, people gradually succumbed to disease and death, thus freeing up resources for the young.

But that era is ending, says Kurzweil. We are entering the age of abundance, when manufacturing and energy will cost virtually nothing, when 1-3% of humanity can feed the rest of world with advanced agriculture, and when we improve on our original design through our insatiable drive to overcome our own limitations.

“This future isn’t an alien invasion,” he says. “It’s emerging from within our civilization, and it will literally be within us. It will be expanding human potential. That’s what the drive of the human species is all about.”

# Smart Dust Is Coming. Are You Ready?

Bernard Marr Contribu

This article is more th

Imagine a world where wireless devices are as small as a grain of salt. These miniaturized devices have sensors, cameras and communication mechanisms to transmit the data they collect back to a base in order to process. Today, you no longer have to imagine it: microelectromechanical systems (MEMS), often called motes, are real and they very well could be coming to a neighborhood near you. Whether this fact excites or strikes fear in you it's good to know what it's all about.

- Measuring anything that can be measured nearly anywhere.
- Enhance inventory control with MEMS to track products from manufacturing facility shelves to boxes to pallets to shipping vessels to trucks to retail shelves.
- Possible applications for the healthcare industry are immense from diagnostic procedures without surgery to monitoring devices that help people with disabilities interact with tools that help them live independently.
- Researchers at UC Berkeley published a paper about the potential for neural dust, an implantable system to be sprinkled on the human brain, to provide feedback about brain functionality.

To facilitate safe free movement during the COVID-19 pandemic, the European Union established the EU Digital COVID Certificate.

In June 2023, the World Health Organization (WHO) will take up the EU system of digital COVID-19 certification to establish a global system that will help protect citizens across the world from on-going and future health threats, including pandemics.

## A strong tool for the reopening of our economies and societies

The EU Digital COVID certificate has been a crucial element in Europe's response to the COVID-19 pandemic, with more than 2.3 billion certificates issued.

*The recent pandemic has reminded us of the deep connections between health and the environment. Adopting a One Health approach is critical not only to prevent outbreaks in zoonotic diseases, but also other urgent environmental issues including food safety and antimicrobial resistance. This page aims at listing the latest information, research, data and/or press releases issued by our partners in Geneva and other institutions around the world.*

## One Health Approach

One Health is an approach in which multiple sectors work together to achieve better public health outcomes ([WHO, 2017](#)). It is rooted in the recognition that human health and animal health are interdependent and bound to the health of the ecosystems in which they exist ([WOHA, n.d.](#)). The complex nature of the interactions between people, animals and plants renders this collaborative, multisectoral and transdisciplinary approach critical to addressing future health risks and challenges.
