

THE NEW WORLD ORDER

PART IX – THE ASSAULT ON THE DOLLAR

We are facing a sea change moment. Over time, civilization has seen landmarks that mark the alteration of history. It's not that the processes have been stagnant before. But often, the preparatory work goes unnoticed until an event of note makes the completion of the process inevitable. The Civil War declared the end of a primarily agrarian American society and opened the door for industrialization and urbanization that followed. Pearl Harbor brought America into full participation as an active world power and catapulted America toward eventual superpower status. 911 brought the security state into place. What we may be facing soon is the Death of the Dollar as the world's reserve currency. What follows will be earth changing.

This is NOT conspiracy theory. Here's what Federal Reserve Chairman Jerome Powell had to say. "Looking forward, rapid changes are taking place in the global monetary system that may affect the international role of the dollar in the future. Most major economies already have or are in the process of developing instant, 24/7 payments. Our own FedNow service will be coming online in 2023. And in light of the tremendous growth in crypto-assets and stablecoins, the Federal Reserve is examining whether a **U.S. central bank digital currency (CBDC)** would improve on an already safe and efficient domestic payments system. As the Fed's white paper on this topic notes, a U.S. CBDC could also potentially help maintain the dollar's international standing."

Fed Chief Jerome Powell

The Fed Head is acknowledging the inevitable. The sanctions put on Russia is hurting the West, including the US, more than they are Moscow. When Russia pegged the Ruble to gold they created a rival currency that could undercut the Dollar's dominance. If the Ruble is backed by gold – well then it becomes more stable than the

Dollar backed by the "full faith and credit" of the US. I mean, after all, we just print them, you know. Here's the proof of that. "The strength of the Russian currency relative to the US currency has increased approximately 34 percent in just under four months."

And the Fed is watching the financial strength of the dollar "diminishing in the markets every day."¹

Now, the BRICS countries, Brazil, Russia, India, China, and South Africa, are mounting a direct

challenge to to Dollar hegemony. “During the BRICS Summit, Russian president Vladimir Putin announced that the five-member economies...plan to issue a ‘new global reserve currency.’”² Their timing may be well placed.

In the same time frame, we are moving toward the full development for a Mark of the Beast payment system. The Daily Mail recently asked in a headline: “**Would you implant a tiny debit card chip in your hand? Forget fingerprint or facial recognition... 'biometric' payment is being touted as the future.**” The Mail touted some of the benefits. “The procedure to fit one leaves customers with a small stitch below the wrist. Once the chip is in, users no longer have to bother with debit or credit cards. To make a purchase they can simply wave their hand over a contactless reader.”³
