Alabama woman kills herself at urging of ChatGPT to fulfill divine prophecy: lawsuit
Attorneys allege ChatGPT was "excessively sycophantic," reinforcing psychosis and delusions in the victim, and argue the company failed to implement adequate safeguards.

OpenAI and its CEO Sam Altman are facing a wrongful death lawsuit after the family of an Alabama woman alleged ChatGPT manipulated the 29-year-old into believing she was a religious prophet whose death was necessary to fulfill a divine mission before allegedly encouraging her to take her own life.

The lawsuit, filed on behalf of Christian Faith Madison's young son in California Superior Court, points to defects in OpenAI's ChatGPT-4o model that attorneys say contributed to Madison's death on June 9, 2025, after months of increasingly disturbing conversations with the chatbot. According to the complaint, Madison died by suicide after what attorneys describe as months of encouragement from ChatGPT. OpenAI had not publicly responded to the lawsuit at the time it was filed.

The AI singularity may have arrived: Technion expert backs OpenAI's Sam Altman's claim

The "singularity point," which represents the moment when AI becomes better at generating results than humans can, might have been reached, according to OpenAI CEO Sam Altman.

OpenAI CEO Sam Altman claimed on Friday that the company is currently working with artificial intelligence models at "the singularity point," which represents the moment when AI becomes better at generating results than humans can.

And Altman's claims might not be unfounded, as Technion-Israel Institute of Technology Professor Yaniv Romano told The Jerusalem Post that he believes the singularity might have been reached, citing recent studies showing that AI models can solve mathematical problems humans can't.

"We are now in the singularity; this is the moment," Altman claimed during an interview with the Relentless podcast, adding that the idea of reaching this point was unthinkable ten years ago, being a "far-off dream at best, while now it's actually the moment that we used to talk about in a very not serious way."

Cyberattack targets over 30 water systems in Minnesota

A coordinated cyberattack targeted more than 30 community water systems across Minnesota on July 26 and 27, state technology officials said. Minnesota IT Services, or MNIT, disclosed the attack from St. Paul on Tuesday, July 28.

The agency said it activated Minnesota's cybersecurity incident response capabilities as soon as it learned of the attack. It now works with federal, state, local, Tribal and private-sector partners.

So far, no drinking-water warning has gone out. Officials said they know of no active city request for residents to change their water use, and the Minnesota Department of Health is working directly with affected water systems.

Police Are Deploying 60 MPH Flock Drones To Read Your License Plate From The Sky

Oh, the thrill of it. Enter, Flock’s autonomous drone. Sixty miles per hour, continuous snaps of your license plate from 2,000 feet away, and everyone around you, to boot. Instantly integrated into Flock’s master database of 50 million other cars. Bonus card: Alpha streams thermal and high-definition video directly to dispatchers. Flock was founded with venture capital from Arch-Technocrat Marc Andreessen. - Patrick Wood, Editor.

If you thought Flock Safety’s Automated License Plate Readers (ALPRs) were deeply invasive when they were just mounted to neighborhood stop signs and hidden inside speed trailers, you might want to look up.

The company that built a massive, interconnected surveillance net across American roadways has officially taken its technology airborne. As highlighted in a viral X post by Josh Walkos, Flock is rolling out “Flock Alpha”—a highly advanced, autonomous police drone designed to track vehicles and suspects from the sky.

A second red heifer is born in the Golan: “God is pressing us toward building the Temple.”

Just a month and a half after the National Red Heifer Institute announced the birth of a red heifer around the reading of Parshat Chukat, the Institute is announcing the birth of a second red heifer, this time in the Golan Heights, on the eve of Tisha B’Av. The same week, two red heifers were inseminated in Ancient Shiloh, part of what the Institute describes as a broader effort to raise a full herd of red heifers and restore the laws of purity to Israel after 2,000 years of exile.

US beefs up military in Middle East as Trump says he’s weighing ‘massive attack’ on Iran

President Trump declared he is actively considering a “massive attack” on Iran even as the Pentagon rapidly reinforces American forces across the Middle East following the deaths of four U.S. service members in less than a week.

“I am considering a massive attack. Bigger than anything we have ever had before. I am close to making a decision. We are fully prepared for it,” Trump told Israel’s Channel 12 on Thursday.

Second Circuit Upholds New York Vaccine Mandate Against the Amish

A federal appeals court has reaffirmed New York's strict school-vaccination requirements, dealing a setback to Amish families seeking religious exemptions. In *Miller v. McDonald*, the U.S. Court of Appeals for the Second Circuit ruled that the state's elimination of religious exemptions does not violate the First Amendment-protected rights of Amish parents and private schools. The decision imposes significant fines for noncompliance.

The case stems from New York's 2019 repeal of religious exemptions during measles outbreaks. Three Amish schools and parents, facing more than \$118,000 in combined fines, argued that mandatory vaccination conflicts with their faith's emphasis on separation from the modern world, Divine Providence, and moral objections tied to vaccine development (e.g., the use of aborted fetal tissue). They invoked *Wisconsin v. Yoder* (1972), which protected Amish educational autonomy, and claimed the policy targeted religious practice. However, the Second Circuit upheld the mandate with the precedent of *Employment Division v. Smith*, a 1990 U.S. Supreme Court (SCOTUS) ruling that the government generally does not have to provide religious exemptions from a law if that law is neutral and applies equally to everyone, even if it incidentally burdens religious practices.

Should the case reach SCOTUS, as legal experts expect, the decision could have nationwide implications for religious exemptions in all 45 states that currently allow them for school vaccine.
